DETAILED ACTION

1. Claims 1-14 are pending.

Drawings

2. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Objections

3. Claim 14 is objected to because of the following informalities: Claim 14 states "maintaining a unionized group list store of names of signatories authorized to execute signed *lists*". Examiner has interpreted the use of the word "lists" to be a typo and has interpreted the claim to read, "to execute signed agents" for the remainder of this office action. Appropriate correction or clarification is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2134

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-5, 9-10, and 12-13 is rejected under 35 U.S.C. 103(a) as being unpatentable over McGee et al US Patent No 6,694,434 in view of Samar et al US Patent No 6,304,974. McGee teaches a method for controlling distribution of executable objects.

6. With regards to claims 1-4, McGee teaches a list of identities of users authorized to execute the agents (McGee, column 6 lines 15-19 and 59-63), signed agents in applications including signatory name and corresponding electronic signature (McGee, column 7 lines 46-53), and agent execution code responsive to cross certificates and electronic signatures for activating signed agents (McGee, column 7 line 46 – column 8 line 1). McGee fails to teach downloadable cross certificates for verifying electronic signatures. Samar discloses a method of managing trusted certificates in which he teaches downloadable cross certificates for verifying electronic signatures (Samar, column 7 line 53 – column 8 line 7). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to utilize Samar's method of downloading certificates because it offers the advantage of ensures a user that the downloaded certificates are secure and trustworthy and thus allows a user to confidently use trusted certificates to authenticate subsequent communications (Samar, column 2 lines 40-59).

7. With regards to claims 5 and 9, McGee as modified and described above fails to teach agent execution code being responsive to scheduled or on-demand access to the signed agent for first accessing a server to update the group list store and cross

Art Unit: 2134

certificate store. Samar teaches the updating of agent execution code being responsive to scheduled or on-demand access to the signed agent for first accessing a server to update the group list store and cross certificate store (Samar, column 8 lines 13-47). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to utilize Samar's updating procedures because they offer the advantage of providing greater efficiency in changing security and allows differentiation of security levels among different divisions or programs (Samar, column 3 lines 14-26).

8. With regards to claims 10 and 13, McGee as modified further teaches the replicating from a first or second server an application referencing the signed agent (McGee, column 13 lines 21-29 and column 10 lines 52-60).

Allowable Subject Matter

9. Claims 6-8, 11, and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The following is a statement of reasons for the indication of allowable subject matter: The cited prior art fails to teach the group list store storing the union of names of signatories authorized to execute agents referenced by applications downloadable from a plurality of servers.

Conclusion

Art Unit: 2134

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
12. Dan et al US Patent No 5,825,877 teaches support for portable trusted software.
13. Benson US Patent No 5,935,246 teaches an electronic copy protection mechanism using challenge and response to prevent unauthorized execution of software.
14. Apperson et al US Patent No 5,978,484 teaches a system and method for safely distributing executable objects.
15. Fredlund et al US Patent No 6,111,950 teaches a method for delivering processing applications linked to data to be processed.
16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew L Nalven whose telephone number is 703 305 8407. The examiner can normally be reached on Monday - Thursday 8-6, Alternate Fridays.
